S.No: 1	Exp. Name: ***sample programs on operator precedence and associativity***	Date: 2023-09-14

Aim:

Write a java program to demonstrate operator precedence and associativity

Source Code:

OperatorPrecedence.java

```
import java.util.Scanner;
class OperatorPrecedence
{
        public static void main(String args[])
        {
                int x,result;
                Scanner sc = new Scanner(System.in);
                System.out.print("Enter a num: ");
                x=sc.nextInt();
                result=x++ +x++*-- x/x++- --x+3>>1|2;
                System.out.println("The operation going is x++ + x++ * --x / x++ - --x + 3
>> 1 | 2");
                System.out.println("result = "+result);
        }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter a num:
4
The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2
result = 3

Test Case - 2
User Output
Enter a num:
-3
The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2
result = 2

S.No: 2	Exp. Name: ***Sample program on java to demonstrate Control structures***	Date: 2023-09-14

ID: 224G1A0582

2022-2026-CSE-B

Aim:

write a java program that uses if-else control statement and print the result

Source Code:

Control.java

```
import java.util.Scanner; class Control
{
        public static void main(String args[])
    {
        int x,y,sum;
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter first num : ");
        x=sc.nextInt(); System.out.print ("Enter second num : ");
        y=sc.nextInt();
        sum=x+y;
        if(sum==20)
        System.out.println("x + y is equal to 20");
        else if(sum<20)
        System.out.println("x + y is less than 20");
        else
        System.out.println("x + y is greater than 20");
   }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter first num :
13
Enter second num :
5
x + y is less than 20

Test Case - 2
User Output
Enter first num :
24
Enter second num :
10
x + y is greater than 20

S.No: 3	Exp. Name: ***Sample Program to demonstrate constructor***	Date: 2023-11-30

Aim:

Write a program to demonstrate constructor class

Source Code:

Student.java

```
class Student {
        int id;
        String name;
        void display() {
                System.out.println(id+" "+name);
        }
        public static void main(String args[]) {
                Student s1=new Student();
                Student s2=new Student();
                s1.display();
                s2.display();
        }
};
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
0 null
0 null

S.No: 11	Exp. Name: ***A program to illustrate Inheritance***	Date: 2023-10-19

Aim:

Write Java program on use of Inheritance.

Create a classVehicle

- contains the data members **color** of String type and **speed** and **size** of integer data type.
- write a method**setVehicleAttributes()**to initialize the data members

Create another classCarwhich is derived from the classVehicle

- contains the data members**cc**and**gears**of**integer**data type
- write a method**setCarAttributes()**to initialize the data members
- write a method**displayCarAttributes()**which will display all the attributes.

Write another class InheritanceDemo with **main()** it receives five arguments **color**, **speed**, **size**, **cc** and **gears**.

Source Code:

InheritanceDemo.java

```
class Vehicle{
        String color;
        int speed,size;
        void setVehicleAttributes(String co,String sp,String si){
                color=co;
                speed=Integer.parseInt(sp);
                size=Integer.parseInt(si);
        }
}
class Car extends Vehicle{
        int cc,gears;
        void setCarAttributes(String co,String sp,String si,String c,String g){
                setVehicleAttributes(co,sp,si);
                cc=Integer.parseInt(c);
                gears=Integer.parseInt(g);
                displayCarAttributes();
        }
        void displayCarAttributes(){
                System.out.println("Color of Car : "+color);
                System.out.println("Speed of Car : "+speed);
                System.out.println("Size of Car : "+size);
                System.out.println("CC of Car : "+cc);
                System.out.println("No of gears of Car : "+gears);
        }
}
class InheritanceDemo{
        public static void main(String args[]){
                Car c = new Car();
                c.setCarAttributes(args[0],args[1],args[2],args[3],args[4]);
        }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Color of Car : Blue
Speed of Car : 100
Size of Car : 20
CC of Car : 1000
No of gears of Car : 5

Test Case - 2
User Output
Color of Car : Orange
Speed of Car : 120
Size of Car : 25
CC of Car : 900
No of gears of Car : 5

S.No: 12	Exp. Name: ***write a java program to prevent inheritance using abstract class.***	Date: 2023-10-19

ID: 224G1A0582

2022-2026-CSE-B

Srinivasa Ramanujan Institute of Technology

Aim:

write a java program to prevent inheritance using abstract class.

- Create an abstract class `Shape`
- Create a class `Rectangle` which extends the class `Shape`
- Class Rectangle contains a method **draw** whcih prints **drawing rectangle**
- Create another class `circle1` which extends `Shape`
- Class circle1 contains a method **draw** whcih prints **drawing circle**
- Create a main class `TestAbstraction1`
- Create object for the class circle1 and called the method draw

Source Code:

TestAbstraction1.java

```
abstract class Shape{
        abstract void draw();
}
class Rectangle extends Shape{
        void draw(){
                System.out.println("drwaing rectangle");
        }
}
class Circle1 extends Shape{
        void draw(){
                System.out.println("drawing circle");
        }
}
class TestAbstraction1{
        public static void main(String args[]){
                Circle1 c = new Circle1();
                c.draw();
        }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
drawing circle

S.No: 13	Exp. Name: ***program on dynamic binding***	Date: 2023-10-19

Aim:

write a program on dynamic binding

Source Code:

Demo.java

```
class Human {
        void display()
        {
                System.out.println("Human walks");

        }
}
class Boy extends Human{
        void display(){
                System.out.println("Boy walks");
        }
}
class Demo{
        public static void main(String args[])
        {
                Boy b = new Boy();
                Human h = new  Human();
                Human hu;
                hu = b;

S.No: 16	Exp. Name: ***Write a Java program to implement Interface***	Date: 2023-11-30

ID: 224G1A0582

Srinivasa Ramanujan Institute of Technology

Aim:

Write a Java program that implements an **interface**.

Create an interface called `Car` with two abstract methods `String getName()` and `int getMaxSpeed()`. Also declare one **default** method `void applyBreak()` which has the code snippet

```
System.out.println("Applying break on " + getName());
```

In the same interface include a **static** method `Car getFastestCar(Car car1, Car car2)`, which returns **car1** if the **maxSpeed** of **car1** is greater than or equal to that of **car2**, else should return **car2**.

Create a class called `BMW` which implements the interface `Car` and provides the implementation for the abstract methods **getName()** and **getMaxSpeed()** (make sure to declare the appropriate fields to store **name** and **maxSpeed** and also the constructor to initialize them).

Similarly, create a class called `Audi` which implements the interface `Car` and provides the implementation for the abstract methods **getName()** and **getMaxSpeed()** (make sure to declare the appropriate fields to store **name** and **maxSpeed** and also the constructor to initialize them).

Create a **public** class called `MainApp` with the **main()** method.
Take the input from the command line arguments. Create objects for the classes `BMW` and `Audi` then print the fastest car.

Note:

Java 8 introduced a new feature called `default` methods or `defender` methods, which allow developers to add new methods to the interfaces without breaking the existing implementation of these interface. These **default** methods can also be overridden in the implementing classes or made abstract in the extending interfaces. If they are not overridden, their implementation will be shared by all the implementing classes or sub interfaces.

Below is the syntax for declaring a `default` method in an **interface** :

```
public default void methodName() {
    System.out.println("This is a default method in interface");
}
```

Similarly, **Java 8** also introduced `static` methods inside interfaces, which act as regular static methods in classes. These allow developers group the utility functions along with the interfaces instead of defining them in a separate helper class.

Below is the syntax for declaring a `static` method in an **interface** :

```
public static void methodName() {
    System.out.println("This is a static method in interface");
}
```

Note: Please don't change the package name.

Source Code:

q11284/MainApp.java

```
package q11284;
interface Car {
	String getName();
	int getMaxSpeed();
	default void applyBreak() {
		System.out.println("Applying break on " + getName());
	}
	static Car getFastestCar(Car car1, Car car2) {
		return (car1.getMaxSpeed() >= car2.getMaxSpeed()) ? car1 : car2;
	}
}
class BMW implements Car {
	private String name;
	private int maxSpeed;
	public BMW(String name, int maxSpeed) {
		this.name = name;
		this.maxSpeed = maxSpeed;
	}
	public int getMaxSpeed() {
		return maxSpeed;
	}
	public String getName() {
		return name;
	}
}
class Audi implements Car {
	private String name;
	private int maxSpeed;
	public Audi(String name, int maxSpeed) {
		this.name = name;
		this.maxSpeed = maxSpeed;
	}
	public int getMaxSpeed() {
		return maxSpeed;
	}
	public String getName() {
		return name;
	}
}
public class MainApp {
	public static void main(String args[]) {
		String name = args[0];
		int speed = Integer.parseInt(args[1]);
		String name1 = args[2];
		int speed1 = Integer.parseInt(args[3]);
		Car car1 = new BMW(name, speed);
		Car car2 = new Audi(name1, speed1);
		System.out.println("Fastest car is : " + Car.getFastestCar(car1,
car2).getName());
	}
};
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
`Fastest car is : BMW`

Test Case - 2
User Output
`Fastest car is : Maruthi`

S.No: 24	Exp. Name: ***program to create a super class called Figure that it returns the area of a rectangle and triangle***	Date: 2023-11-09

ID: 224G1A0582

Aim:

Write a java program to create a super class called Figure that receives the dimensions of two dimensional objects. It also defines a method called area that computes the area of an object. The program derives two sub-classes from Figure. The first is Rectangle and second is Triangle. Each of the sub classes override area() so that it returns the area of a rectangle and triangle respectively

Source Code:

AbstractAreas.java

```
import java.util.*;
abstract class Figure{
    double dim1,dim2,dim3,dim4;
    Figure(double a,double b){
        dim1=a;
        dim2=b;
        dim3=a;
        dim4=b;
    }
    abstract void area();
}
class Rectangle extends Figure{
        Rectangle(double a,double b){
                super(a,b);
        }
        void area(){
                double area=dim1*dim2;
                System.out.println("Rectangle:");
                System.out.println("Area is "+area);
        }
}
class Triangle extends Figure{
        Triangle (double a,double b){
                super(a,b);
        }
        void area(){
                double area=0.5*dim1*dim2;
                System.out.println("Triangle:");
                System.out.println("Area is "+area);
        }
}
class AbstractAreas{
        public static void main(String args[]){
                Scanner sc = new Scanner(System.in);
                System.out.println("Enter lenght and breadth of Rectangle :");
                double dim1=sc.nextDouble();
                double dim2=sc.nextDouble();
                System.out.println("Enter height and side of Triangle :");
                double dim3=sc.nextDouble();
                double dim4=sc.nextDouble();
                Rectangle r=new Rectangle(dim1,dim2);
                Triangle t = new Triangle(dim3,dim4);
                Figure fig;
                fig=r;
                fig.area();
                fig=t;
                fig.area();
        }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1

User Output
Enter lenght and breadth of Rectangle :
12
14
Enter height and side of Triangle :
7
5
Rectangle:
Area is 168.0
Triangle:
Area is 17.5

Test Case - 2
User Output
Enter lenght and breadth of Rectangle :
4
8
Enter height and side of Triangle :
5
3
Rectangle:
Area is 32.0
Triangle:
Area is 7.5

S.No: 25	Exp. Name: ***Write a Java program demonstrating the usage of Threads***	Date: 2024-01-01

Aim:

Write a Java program that uses three threads to perform the below actions:

1. First thread should print "Good morning" for every 1 second for 2 times
2. Second thread should print "Hello" for every 1 seconds for 2 times
3. Third thread should print "Welcome" for every 3 seconds for 1 times

Write appropriate **constructor** in the `Printer` class which implements `Runnable` interface to take three arguments : **message**, **delay** and `count` of types **String**, **int** and **int** respectively.

Write code in the `Printer.run()` method to print the **message** with appropriate **delay** and for number of times mentioned in **count**.

Write a class called `ThreadDemo` with the `main()` method which instantiates and executes three instances of the above mentioned `Printer` class as threads to produce the desired output.

[**Note:** If you want to sleep for **2** seconds you should call `Thread.sleep(2000);` as the `Thread.sleep(...)` method takes milliseconds as argument.]

Note: Please don't change the package name.

Source Code:

```
q11349/ThreadDemo.java
```

```
package q11349;
public class ThreadDemo {
	public static void main(String[] args) throws Exception {
		Thread t1 = new Thread(new Printer("Good morning", 1, 2));
		Thread t2 = new Thread(new Printer("Hello", 1, 2));
		Thread t3 = new Thread(new Printer("Welcome", 3, 1));
		t1.start();
		t2.start();
		t3.start();
		t1.join();
		t2.join();
		t3.join();
		System.out.println("All the three threads t1, t2 and t3 have completed
execution.");
	}
}
class Printer implements Runnable {
	private String message;
	private int delay;
	private int count;
	public Printer(String message, int delay, int count) {
		this.message = message;
		this.delay = delay;
		this.count = count;
	}
	public void run() {
		for (int i = 0; i < count; i++) {
			try {
				System.out.println(message);
				Thread.sleep(delay * 500);
			} catch (Exception e) {
				e.printStackTrace();
			}
		}
	}
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Good morning
Hello
Welcome
Good morning
Hello
All the three threads t1, t2 and t3 have completed execution.

S.No: 26	Exp. Name: ***Program to find and replace pattern in a given file.***	Date: 2024-01-01

ID: 224G1A0582

2022-2026-CSE-B

Srinivasa Ramanujan Institute of Technology

Aim:

Write a java program to find and replace patterns in a given file. Replace the string "**This is test string 20000**" with the input string.

Note: Please don't change the package name.

Source Code:

q29790/ReplaceFile.java

```
package q29790;

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
No.Of Elements in TreeSet:
3
String:
Never
String:
Give
String:
Up
TreeSet Elements by Iterating:
Give
Never
Up

Test Case - 2

User Output
No.Of Elements in TreeSet:
2
String:
Hello
String:
There
TreeSet Elements by Iterating:
Hello
There
